St. George Technology develops and manufactures only the highest quality Poly-Ethyl Methacrylate (PEMA) nail dipping powder and nail acrylic in the industry.

### Next Generation NAIL Chemistry

**DA-660**
- Exclusive dip powder
- Provides even and solid adherence
- Self-leveling
- Fast application process
- Lasts up to 5 weeks
- Soak-off system

**MA-097**
- 2-in-1 Dip and Sculpting Powder
- Provides strong adhesion
- Excellent flow
- Great strength and flexibility
- Non-yellowing formula

**MV-32**
- Exclusive sculpting acrylic
- Excellent clarity
- Medium-fast cure
- Great strength and flexibility
- Provides strong adhesion
- Non-yellowing formula

**MV-44**
- 2-in-1 Dip and Sculpting Powder
- Professional working time
- Superior strength and durability
- Satisfies demanding monomer chemistries
- Provides strong adhesion

---

We are totally vertical in our process and procedures, this allows us to be able to maintain constant control over material specifications, quality assurance and product repeatability. Overwhelmingly, those who try our products become loyal customers for years.

We produce our material in our modern, high volume factories and our products are distributed around the world, with our US distribution point in Wilmington, NC. Our distribution chain is robust, with containers of product arriving at our dock weekly.

We consistently work toward complete customer satisfaction as well as the development of cutting edge technology for the next generation of cosmetic nail products.

---

**Strong & Durable**
**Increased Productivity**
**Fast Application**
**Lower Cost**
**Quick & Easy Removal**

**Large US Warehouse**
**Custom manufacturing**
**Technical expertise**
**Global distribution**
**Cutting-edge technology**
